PROFESSIONAL BACKGROUND

Positions

March 2015 – current: Edwin H. Murty Professor of Engineering, Washington University in St. Louis, School of Engineering & Applied Sciences

January 2013 – current: Co-Director, Center for High Performance Computing, Washington University in St. Louis

September 2012 – current: Director, Center for Biological Systems Engineering, Washington University in St. Louis, School of Engineering & Applied Sciences

January 2011 – current: Professor, Department of Biomedical Engineering, Washington University in St. Louis, School of Engineering & Applied Sciences

March 2007 – current: Member, Hope Center for Neurodegenerative Disorders, Washington University School of Medicine

July 2007 – December 2010: Associate Professor, Department of Biomedical Engineering, Washington University in St. Louis, School of Engineering & Applied Sciences; Adjunct Associate Professor, Department of Biochemistry & Molecular Biophysics, Washington University School of Medicine

February 2009 – August 2010: Director, Center for Computational Biology, Washington University School of Medicine

May 2002 – August 2010: Member, Center for Computational Biology, Washington University School of Medicine

September 2001 – June 2007: Assistant Professor, Department of Biomedical Engineering, Washington University in St. Louis, School of Engineering & Applied Sciences; Adjunct Assistant Professor, Department of Biochemistry and Molecular Biophysics, Washington University School of Medicine

Education and training

Postdoctoral Scientist, 1998-2001

Department of Biophysics and Biophysical Chemistry, Johns Hopkins University, School of Medicine, Baltimore, MD; Mentor: Professor George D. Rose

Postdoctoral Scientist, 1996-1998

Department of Biochemistry and Molecular Biophysics, Washington University in Saint Louis, School of Medicine, St. Louis, MO; Mentor: Professor Jay W. Ponder

Ph.D., Biological Physics, 1992-1996

Department of Physics and Astronomy, Tufts University, Medford, MA

Advisor: Professor David L. Weaver (deceased)

Thesis: Algorithms for modeling folding pathways of proteins.

M.S., Solid State Physics, 1990-1992

Department of Physics and Astronomy, Tufts University, Medford, MA

B.Sc., Honors in Physics, Mathematics, and Electronics, 1986-1989

St. Joseph's College, Bangalore University, Bangalore, India

RESEARCH PROGRAM

Summary of research interests

My research is focused on four topics: the molecular basis of neurodegeneration in Huntington's disease (HD) and related disorders, phase transitions that lead to protein and RNA condensates driven by multivalent molecules, the biophysics of intrinsically disordered proteins, and design of responsive, protein-based biomaterials. Our work is driven by a blend of novel multiscale computer simulations, adaptations and developments of polymer physics and statistical physics theories, new ideas regarding the physics of living systems, *in vitro* and in cell experiments, and collaborations that enable molecular and cellular level investigations.

Intrinsically disordered proteins (IDPs): We have developed and used novel combinations of polymer physics theories, molecular simulations, and biophysical experiments to provide definitive descriptors for the relationships between information encoded in IDP sequences and their conformational properties. We are using *de novo* sequence design to modulate conformational properties of IDPs and quantify the impact of these changes on functions of specific IDPs and the distinct cellular processes they control.

Neurodegeneration: We work on connecting the driving forces for and the mechanisms of polyglutamine aggregation and phase separation to intracellular interactions that lead to neurodegeneration in HD and other polyglutamine expansion disorders. An emerging focus is on the modulation of aggregation and phase behavior by endogeneous networks of protein-protein interactions.

Phase transitions in cell biology: We have considerable interest in the problem of phase transitions that are controlled or influenced by multivalent proteins and RNA molecules. These phase transitions include phase separation, sol-gel transitions, the formation of liquid crystals, and the design of novel, stimulus responsive biomaterials. We are developing multiscale, multiresolution methods to understand the driving forces for, mechanisms of, and functions associated with membraneless organelles, also known as biomolecular condensates, that form as the result of phase transitions. This problem has direct relevance to spatiotemporal organization and information transduction within cells.

Molecular and Cellular Engineering: We are building on our work pertaining to phase transitions and IDPs to develop, prototype, and deploy computational methods to predict phase behavior from amino acid sequence and advance the design of responsive peptide and protein-based biomaterials.

Awards – Reverse Chronological Order

Invited Keynote Speaker, 2018 Dutch Biophysics Meeting, Veldhoven, Netherlands, October 2018.

Dean's Award for Outstanding Contributions In Service of the Mission of the School of Engineering & Applied Sciences, Washington University in St. Louis, April 2017.

Syracuse Biomaterials Institute, Invited Keynote Distinguished Speaker, Syracuse University, April 2017.

Inducted to the College of Fellows of the American Institute for Medical and Biological Engineering (AIMBE), April 2016.

Invited Keynote Speaker, 29th Annual Gibbs Conference on Biothermodynamics, Touch of Nature Conference Center, Carbondale, IL October 2015.

Invited Keynote Speaker at the Annual Symposium of the Cellular Dynamics and Macromolecular Complexes CREATE Graduate Training Program, University of Montreal, Canada, August 2015.

Installed as the Edwin H. Murty Professor of Engineering, Washington University in St. Louis, School of Engineering & Applied Sciences, March 2015.

Invited Keynote Speaker, Intrinsically Disordered Proteins Gordon Research Conference, July 2014.

Invited Keynote Speaker, 8th Annual Symposium of the Biophysical Society's Intrinsically Disordered Proteins Subgroup, February 2014.

Elected fellow of the American Association for Advancement of Science (AAAS), November 2013.

Basil O'Connor Starter Scholar Award, March of Dimes Research Foundation, 2004.

Graduate Biophysics Fellowship, selected to attend Princeton-NEC workshop, June 1996.

John F. Burlingame Graduate Research Fellowship, Tufts University, 1995 – 1996.

National Merit Scholarship, Bangalore University, Bangalore, India, 1989.

Honors – Reverse Chronological Order

Member, Scientific Advisory Board, EU MCSA-RISE consortium for the functional characterization of Intrinsically Disordered Proteins (IDPfun), March 01, 2018 – February 28, 2022

Member, Scientific Advisory Board at the Max Planck Institute of Molecular Cell Biology and Genetics, Dresden, Germany, term ending December 31, 2022

Chair the 2017 FASEB Summer Research Conference on Molecular Mechanisms and Physiological Consequences of Protein Aggregation

Guest Editor, Current Opinion in Structural Biology, 2017

Invited to give the Telluride town talk entitled "Neurodegeneration from the ground up" as an accompaniment to the Telluride Science Research Conference Series, July 2015

Guest Editor, Special Issue of Seminars on Cell and Developmental Biology, 2015

Member, Editorial Advisory Board, Biophysical Journal, December 2014 – current

Member, Executive Committee, Protein Folding Consortium, Sponsored by the National Science Foundation, Research Coordination Network, September 2014 – current

Member, Editorial Board of Protein Engineering, Design and Selection, July 2014 – current

Elected Symposium Co-Chair for the 9th Annual Symposium of the Biophysical Society's Intrinsically Disordered Proteins Subgroup, February 2014

Faculty 1000 Member, Structural Biology: Theory & Simulation Section, April 2013 – August 2016

BMC Biophysics, Editorial Board Member, 2012 – current

Chair, 2nd Gordon Research Conference on Intrinsically Disordered Proteins, 2012

One of Fifteen Scientists Invited by the National Science Foundation to Participate in a Workshop to Discuss the Future and Frontiers of Protein and RNA Biophysics, September 2011

Charter Member, National Institutes of Health Center for Scientific Review, Biophysics of Neural Systems Study Section, June 2008 – June 2012

Member, Protein Folding Consortium, Supported by the National Science Foundation, Research Coordination Network, May 2009 – current

Chair, by election, Intrinsically Disordered Proteins Subgroup, Biophysical Society, 2009

Regular Member, National Science Foundation, Molecular & Cellular Biosciences, Biophysics Panel, April 2008 – Current

Notable Invited Talks at National and International Conferences

Invited Symposium Speaker, 63rd Annual Meeting of the Biophysical Society, Baltimore, March 2019.

Invited Speaker and Session Chair, Intrinsically Disordered Proteins Gordon Research Conference, Les Diabrelets, Switzerland, July 2018

Invited Speaker, EMBO | EMBL Symposium: Cellular Mechanisms Driven by Liquid Phase Separation, Heidelberg, Germany, May 2018

Invited Speaker, ASBMB Symposium at Experimental Biology 2018, San Diego, CA, April 2018

Invited Speaker, 13th CHDI Annual Huntington's Disease Therapeutics Conference: A forum for Drug Discovery and Development, Palm Springs, CA, February 2018

Invited Speaker, International Conference on Intrinsically Disordered Proteins, IISER Mohali, India, December 2017

Invited Speaker, Build the Cell Subgroup Symposium at the Annual Meeting of the American Society for Cell Biology, Philadelphia, PA, December 2017

Invited Speaker, Telluride Science Research Conference on Intrinsically Disordered Proteins and Membraneless Organelles, Telluride, CO, July 2017

Invited Speaker, Proteins Gordon Research Conference, Holderness, New Hampshire, June 2017

Invited Speaker, Inaugural symposium of the St. Jude Research Collaborative on membraneless organelles, The Biology of Liquid Organelles, St. Jude Children's Research Hospital, May 2017

Invited Speaker, New Frontier in Cellular Structure and Function, Genetics, Genomics and Systems Biology Symposium Sponsored by the University of Chicago, May 2017

Invited Speaker, VIB Conference Series, Phase Transitions in Biology and Disease, Leuven, Belgium, May 2017

- Invited Speaker, Symposium on Coacervation: Physics, Chemistry, and Biology. Part of the 253rd National Meeting of the American Chemical Society, San Francisco, April 2017
- Invited Speaker, 3rd International Workshop on Protein Folding & Dynamics, National Centre for Biological Sciences, Bangalore, India, November 2016
- Invited Speaker, 2nd COST Symposium on Non-Globular Proteins in Molecular Pathophysiology, Belgrade, Serbia, September 2016
- Invited Speaker, Physical Chemistry Division Symposium In Intrinsically Disordered Proteins at the 252nd National Meeting of the American Chemical Society, August 2016
- Invited Speaker, 30th Anniversary Symposium of the Protein Society, July 2016
- Invited Speaker, 3rd Workshop on the Physical Basis of Cellular Adaptation & Memory, Bellairs Research Institute, Barbados, April 2016
- Invited Speaker, CHDI Htt Protein Lifecycle Workshop, New York City, March 2016
- Invited Symposium Speaker, 60th Annual Meeting of the Biophysical Society, Los Angeles, CA March 2016
- Invited Keynote Speaker, International Symposium on Chromatin Dynamics: Theoretical and Polymer Physics Approaches, Hiroshima, Japan, December 2015
- Invited Speaker, Southeast and Southwest regional meeting of the American Chemical Society, Symposium on Intrinsically Disordered Proteins, Memphis, TN, November 2015
- Invited Opening Plenary Speaker, 12th Annual New England Structure Symposium (NESS), Theme: Structure and Dynamics of Intrinsically Unfolded Proteins, sponsored by the University of Connecticut, Storrs, CT, October 2015
- Invited Speaker, CECAM Workshop on Computational Modeling of Intrinsically Disordered Proteins, Zurich, Switzerland August 2015
- Invited Speaker, FASEB meeting on Molecular Mechanisms and Physiological Consequences of Protein Aggregation, June 2015
- Invited Speaker, Proteins Gordon Research Conference, Holderness, New Hampshire, June 2015
- Invited Speaker, Conference on Intracellular Phase Transitions: RNA, Protein, Lipids, and Beyond. Princeton University, April 2015
- Invited Speaker, International Scientific Seminar, Chromosome Dynamics: Computational Models and Experimental Data, Sponsored by the Royal Society, Chicheley Hall, Buckinghamshire, UK, November 2014
- Invited Speaker and Session Chair, Thematic Meeting, Disordered Motifs and Domains in Cell Control, Dublin Ireland – Sponsored by the Biophysical Society, October 2014
- Invited Speaker, Gordon Research Conference on Protein Folding Dynamics, January 2014
- Invited Speaker, 3rd USA-Mexico Workshop in Biological Chemistry: Protein Folding, Dynamics, and Function, November 2013
- Invited Speaker, CECAM International Workshop on Intrinsically Disordered Proteins, ETH Zurich, September 2013
- Invited Speaker, FASEB Summer Research Conference on Molecular Mechanisms and Physiological Consequences of Protein Aggregation, June 2013

Invited Speaker, 57th Annual Meeting of the Biophysical Society, February 2013

Invited Speaker, International Symposium on Protein Folding, National Centre for Biological Sciences, Bangalore, India, October 2012

Invited Speaker, Biopolymers Gordon Research Conference, June 2012

Invited Keynote Speaker, Annual Midwest Conference on Protein Folding, Assembly, and Molecular Motions, May 2011

Invited Speaker, Gordon Research Conference on Protein Folding Dynamics, January 2010

Invited Speaker, FASEB Summer Research Conference on Biophysics and Biology of Amyloids, June 2009

Invited Speaker and Session Chair, 53rd Annual Meeting of the Biophysical Society, March 2009

Invited Speaker, 22nd Annual Symposium of The Protein Society, July 2008

Invited Speaker, Biopolymers Gordon Research Conference, June 2008

Invited Speaker and Symposium Co-Chair, 2nd Annual Symposium of the Biophysical Society's Intrinsically Disordered Proteins Subgroup, February 2008

Invited Speaker, FASEB Amyloid Meeting, June 2006

Invited speaker, I2CAM Workshop on Protein Aggregation and Amyloid Formation in Systemic and Neurodegenerative Diseases, EPFL, Lausanne, Switzerland, July 2005

Awards & Honors to Members of the Lab – Reverse Chronological Order

Ms. Megan C. Cohan, graduate student in the Pappu lab, was chosen to receive a travel award, based on her submitted abstract, to present a poster at the EMBO | EMBL Symposium on Cellular Mechanisms Driven by Liquid Phase Separation, May, 2018.

Dr. Kiersten M. Ruff, postdoctoral fellow in the Pappu lab, was chosen, based on her submitted abstract, to speak at the EMBO | EMBL Symposium on Cellular Mechanisms Driven by Liquid Phase Separation, May, 2018.

Dr. Jeong-Mo Choi, postdoctoral fellow in the Pappu lab, was chosen to speak in a platform session on intrinsically disordered proteins at the 62nd Annual Meeting of the Biophysical Society, San Francisco, February 2018.

Dr. Kiersten M. Ruff, postdoctoral fellow in the Pappu lab, was chosen to speak in a platform session on intrinsically disordered proteins at the 62nd Annual Meeting of the Biophysical Society, San Francisco, February 2018.

Dr. Jeong-Mo Choi, postdoctoral fellow in the Pappu lab, was chosen to give the Molecular Kinetics sponsored postdoctoral talk at the 2018 symposium of the Intrinsically Disordered Proteins subgroup to be held in conjunction with the 62nd Annual Meeting of the Biophysical Society, San Francisco, February 2018.

Dr. Alex S. Holehouse, postdoctoral fellow in the Pappu lab, was one of the invited speakers in the symposium organized by the Biopolymers In Vivo Subgroup at 62nd Annual Meeting of the Biophysical Society, San Francisco, February 2018.

Dr. Alex S. Holehouse, postdoctoral fellow in the Pappu lab, was chosen to give a short talk at the 2018 Protein Folding Dynamics Gordon Research Conference, Galveston, TX, January 2018.

Ms. Megan C. Cohan, Biomedical Engineering Graduate Student in the Pappu Lab, received a travel award to attend the 2017 annual meeting of the Biomedical Engineering Society to be held in Phoenix, AZ, October 2017.

- Dr. Kiersten M. Ruff, postdoctoral fellow in the Pappu Lab, was chosen to give a short talk at the 2017 FASEB Science Research Conference on Protein Aggregation in Health and Disease in Steam Boat Springs, CO, June 2017.
- Ms. Megan C. Cohan, Biomedical Engineering Graduate Student in the Pappu Lab, was chosen to give a student talk at the annual meeting of the NSF sponsored Protein Folding Consortium in Berkeley, CA, June 2017.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab gave a talk at the weeklong workshop on the Physics of Cellular Adaptation held at the Bellairs Institute in Barbados, April 2017.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab, Recipient of the Spencer T. and Ann W. Olin for superior accomplishments in biomedical research doctoral students at Washington University, February 2017.
- Mr. Tyler S. Harmon, Physics Graduate Student in the Pappu Lab Recipient of the SRAA Award for Best Poster, 61st Annual Meeting of the Biophysical Society, Award Sponsored by the Intrinsically Disordered Proteins Subgroup, February 2017.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab gave an invited platform session talk and chaired this session at the 61st Annual Meeting of the Biophysical Society, February 2017.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab, received a student speaker award at the 23rd Annual retreat of the DBBS Computational & Molecular Biophysics Graduate Program for his talk entitled *Phase separation of intrinsically disordered proteins yields low-density "empty" liquids*.
- Ms. Megan C. Cohan, Biomedical Engineering Graduate Student in the Pappu Lab, received a travel award to attend the fourth biennial Intrinsically Disordered Proteins Gordon Research Conference held in Les Diabrelets, Switzerland in June 2016.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab, received a travel award to attend the fourth biennial Intrinsically Disordered Proteins Gordon Research Conference held in Les Diabrelets, Switzerland in June 2016.
- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Student in the Pappu Lab, was one of the awardees for best posters presented at the fourth biennial Intrinsically Disordered Proteins Gordon Research Conference held in Les Diabrelets, Switzerland in June 2016.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab was elected as co-chair of the 2018 Graduate Research Seminar that is to accompany the fifth biennial Intrinsically Disordered Proteins Gordon Research Conference.
- Mr. Tyler S. Harmon, Physics Graduate Student in the Pappu Lab was named as one of the CBSE Graduate Student Scholar by the Center for Biological Systems Engineering at Washington University for the period between July 01, 2016 and June 30, 2017.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab was named as the Kent and Bonnie Lattig CBSE Graduate Student Scholar by the Center for Biological Systems Engineering at Washington University for the period between July 01, 2016 and June 30, 2017.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab selected to give an invited talk at the Gordon Research Seminar preceding the Gordon Research Conference on Intrinsically Disordered Proteins, Les Diabrelets, Switzerland, June 2016.

- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab gave an invited platform session talk at the 60th Annual Meeting of the Biophysical Society, February 2016.
- Mr. Tyler S. Harmon, Physics Graduate Student in the Pappu Lab gave an invited platform session talk at the 60th Annual Meeting of the Biophysical Society, February 2016.
- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Student in the Pappu Lab, was named the first Kent and Bonnie Lattig CBSE Graduate Student Scholar by the Center for Biological Systems Engineering at Washington University in St. Louis for the period between July 2015 and June 2016.
- Mr. Tyler S. Harmon, Physics Graduate Student in the Pappu Lab, was chosen to give the opening talk at the 2015 edition of the annual meeting of the NSF sponsored Protein Folding Consortium, Berkeley, May 2015.
- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Student in the Pappu Lab, was reappointed as a CBSE Graduate Student Scholar by the Center for Biological Systems Engineering at Washington University in St. Louis for the period between July 2015 and June 2016.
- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Students in the Pappu Lab was chosen to speak at the Princeton Workshop on Intracellular Phase Transitions, April 2015.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab, Recipient of the SRAA Award for Best Poster, 59th Annual Meeting of the Biophysical Society, Award Sponsored by the Intrinsically Disordered Proteins Subgroup, February 2015.
- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Student in the Pappu Lab, Selected to deliver a platform session talk at the 59th annual meeting of the Biophysical Society, Baltimore, MD, February 2015.
- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Student in the Pappu Lab, was appointed as a CBSE Graduate Student Scholar by the Center for Biological Systems Engineering at Washington University in St. Louis for the period between July 2014 and June 2015.
- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Student in the Pappu Lab, Selected to speak at the first Graduate Research Seminar preceding the 3rd Gordon Research Conference on Intrinsically Disordered Proteins, Stonehill College, MA, June 2014.
- Mr. Albert H. Mao, MSTP and Computational & Molecular Biophysics Graduate Student in the Pappu Lab, received Washington University's Spencer T. Olin prize for outstanding graduate research, April 2014.
- Mr. Alex S. Holehouse, Computational & Molecular Biophysics Graduate Student in the Pappu Lab, Recipient of the SRAA Award for Best Poster, 58th Annual Meeting of the Biophysical Society, Award Sponsored by the Intrinsically Disordered Proteins Subgroup, February 2014.
- Dr. Anuradha Mittal, Postdoc in the Pappu Lab, Selected to give a platform session talk at the 58th Annual Meeting of the Biophysical Society, San Francisco, February 2014.
- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Student in the Pappu Lab, Recipient of the SRAA Award for Best Poster, 58th Annual Meeting of the Biophysical Society, Award Sponsored by the Intrinsically Disordered Proteins Subgroup, February 2014.

- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Student in the Pappu Lab, Received Honorable Mention from National Science Foundation in response to Graduate Student Fellowship, with Enhanced Access to Cyberinfrastructure Resources, Including XSEDE Supercomputing Time to Support Research Toward Completion of Graduate Program, 2013.
- Ms. Kiersten M. Ruff, Computational & Systems Biology Graduate Student in the Pappu Lab, Recipient of the SRAA Award for Best Poster, 57th Annual Meeting of the Biophysical Society, Award Sponsored by the Intrinsically Disordered Proteins Subgroup, 2013.
- Dr. Scott L. Crick, Recipient of the National Institutes of Health, National Research Service Award for Postdoctoral Research following the completion of thesis work and a two-year postdoctoral stint in the Pappu Lab, 2013.
- Mr. Nicholas Lyle, Computational & Systems Biology Graduate Student, Best Poster Award, Intrinsically Disordered Proteins, Gordon Research Conference, 2012.
- Dr. Scott L. Crick, Postdoc in the Pappu Lab, Selected to deliver a Platform Session Talk at the 56th Annual Meeting of the Biophysical Society, San Diego, CA, 2012.
- Dr. Rahul K. Das, Postdoc in the Pappu Lab, Recipient of the Molecular Kinetics Postdoctoral Speaking Award and Honorarium, 5th Annual Symposium of the Intrinsically Disordered Proteins Subgroup at the 55th Annual Meeting of the Biophysical Society, Baltimore, MD, 2011.
- Mr. Albert H. Mao, MSTP and Computational & Molecular Biophysics Graduate Student in the Pappu Lab, Recipient of the SRAA Award for Best Poster, 55th Annual Meeting of the Biophysical Society, Baltimore, MD, Award Sponsored by the Intrinsically Disordered Proteins Subgroup, 2011.
- Mr. Scott L. Crick, Biomedical Engineering Graduate Student in the Pappu Lab, Selected to deliver a Platform Symposium Talk at the 54th Annual Meeting of the Biophysical Society, San Francisco, CA, 2010.
- Dr. Matthew A. Wyczalkowski, Former Biomedical Engineering Graduate Student, Recipient of the National Institutes of Health, National Research Service Award for Postdoctoral Research following the completion of thesis work in the Pappu Lab, 2010.
- Dr. Alan A. Chen, Former Computational & Molecular Biophysics Graduate Student, Recipient of the National Institutes of Health, National Research Service Award for Postdoctoral Research following the completion of thesis work in the Pappu Lab, 2010.
- Dr. Andreas Vitalis, Computational & Molecular Biophysics Graduate Student Empiris Award for Research in Brain Diseases, Award received for Ph.D. thesis work performed in the Pappu Lab, 2010.

Manuscripts in preparation

1. M. C. Cohan, A.E. Posey, S. Grigsby, A. Mittal, A.S. Holehouse, P.J. Buske, P. A. Levin, **R.V. Pappu**. Charge patterning within the C-terminal disordered tail determines optimal FtsZ self-assembly and robustness of cell division in rod-shaped bacteria. *To be submitted to Cell Reports*.
2. K.M. Ruff, S. Roberts, T.S. Harmon, A. Chilkoti*, **R.V. Pappu***. Sequence design principles that determine stimulus responsive phase transitions in protein polymers. *To be submitted to special issue of Journal of Molecular Biology on phase transitions*. (*Co-corresponding authors).
3. I. Peran*, A.S. Holehouse*, I.S. Caricco, **R.V. Pappu**, O. Bilsel, D.P. Raleigh. Direct observation of protein collapse transitions and characterization of unfolded states under folding conditions. (*Co-first authors).
4. J-M. Choi, **R.V. Pappu**. Refined coil library statistics based on experimental data for calibration of conformational equilibria of peptides. *To be submitted to Journal of Chemical Theory and Computation*.
5. J-M. Choi, **R.V. Pappu**. Improved ABSINTH implicit solvation model and protein forcefield paradigm based on refined coil library statistics. *To be submitted to Journal of Chemical*

Theory and Computation.

6. J-M. Choi, J. Wang, A.S. Holehouse, S. Alberti, A.A. Hyman, **R.V. Pappu**. Stickers and spacers model for the phase behavior of archetypal intrinsically disordered proteins.
7. J.M. Choi*, J. Lalmansingh*, **R.V. Pappu**. Comparative assessments of molecular mechanics forcefields against refined coil library conformational statistics for peptides. (*Co-first authors).
8. T.S. Harmon, S. Roberts, A. Chilkoti, **R.V. Pappu**. Physical model for programmable hysteresis in partially ordered protein polymers that undergo thermoresponsive phase transitions.
9. M. Fossat, J-M. Choi, K.M. Ruff, **R.V. Pappu**. Methods for multiscale simulations of conformations, interactions, and phase behavior of intrinsically disordered proteins. *Invited review in preparation for Quarterly Reviews in Biophysics.*
10. A.E. Posey, J-M. Choi, A.S. Holehouse, K.M. Ruff, **R.V. Pappu**. Synergistic methods to uncover sequence-encoded driving forces for phase separation in proteins with intrinsically disordered regions. *Invited contribution for Methods in Enzymology.*
11. E.W. Martin, A.S. Holehouse, **R.V. Pappu**, T. Mittag. Shared sequence determinants of single chain collapse and collective phase behavior in an archetypal low complexity domain.
12. A.S. Holehouse, **R.V. Pappu**. Sequence determinants of the (de)coupling between single chain and phase behavior of intrinsically disordered proteins.
13. J-M. Choi, **R.V. Pappu**. Coarse-grained models for capturing the phase behavior of intrinsically disordered proteins that fit the description of stickers and spacers. In preparation for *PLoS Computational Biology*.
14. A.E. Posey*, T.S. Harmon*, M. Fossat, **R.V. Pappu**. Preferential charge neutralization stabilizes alpha helices in peptides with specific patterns of oppositely charged residues.
15. S. Barrera-Vilarmau*, A.S. Holehouse*, L. Chemes, **R.V. Pappu**. Physico-chemical principles underlying the conservation of sequence-ensemble relationships in rapidly evolving intrinsically disordered proteins. (*Co-first authors).

Grants

CURRENT

National Science Foundation, DMR 1729783 – DMREF Collaborative Research

Title: *High throughput exploration of sequence space of peptide polymers that exhibit aqueous demixing phase behavior*

Funding Period: October 01, 2017 – September 30, 2021

Principal Investigator: Ashutosh Chilkoti, Duke University

Role in the project: *Co-Principal Investigator* with Stefan Zauscher (Duke University)

Human Frontier Science Program (HFSP), RGP0034/2017

Title: *Elucidating the molecular logic of membrane-free compartment function and assembly*

Funding period: September 01, 2017 – August 31, 2020

Role in the project: *Co-Principal Investigator* with Simon Alberti (Max Planck Institute, Dresden) and Stephen W. Michnick (University of Montreal)

St. Jude Research Collaborative, Sponsored by St. Jude Children's Research Hospital,

Title: *Biology and Biophysics of Membraneless Organelles*

Funding period: February 01, 2017 – January 31, 2022

Role in the project: *Project Principal Investigator*, Computational & Theoretical Modeling

National Science Foundation, MCB-1614766

Title: *Multiscale Modeling of Phase Transitions Driven by Multivalency and Disordered Proteins*

Funding period: July 15, 2016 – July 14, 2020

Role in the project: *Principal Investigator*

National Institutes of Health (NINDS), 5R01NS056114-10-14

Title: *Role of chain length and sequence contexts on polyglutamine oligomerization*

Funding period: July 01, 2016 – June 30, 2021

Role in the project: *Principal Investigator*

National Institutes of Health, 1R01NS089932-A1

Title: *Mechanism of modulation of huntingtin exon 1 aggregation by profilin*

Funding period: April 01, 2016 – December 31, 2020

Principal Investigators: **Rohit Pappu (contact PI)**, Marc I. Diamond, and Ralf Langen

Role in the project: *Main Principal Investigator* in Multi-PI grant

National Institutes of Health, 1R01GM108785

Title: *Signal transduction by ERBB2 / ERBB3 oligomers*

Funding period: October 01, 2013 – March 31, 2017

Principal Investigator: Linda J. Pike

Role in the project: *Co-Investigator*

PENDING

National Institutes of Health RO1NS105497

Title: *Huntingtin Conformation and Neurodegeneration*

Proposed Funding Period: September 01, 2018 – June 31, 2023

Principal Investigator: Steven Finkbeiner, UCSF and the Gladstone Institute

Role in the project: *Co-Principal Investigator* in Multi-PI proposal

COMPLETED

National Institutes of Health (NINDS), 5R01NS056114-05-09

Title: *Role of chain length and sequence contexts on polyglutamine oligomerization*

Funding period: July 01, 2011 – June 30, 2016

Role in the project: PI

National Science Foundation, MCB-0718924

Title: *Phase behavior of intrinsically disordered proteins*

Funding period: September 01, 2011 – August 31, 2015

Role in the project: Principal Investigator

National Institutes of Health, 1S10OD018091 Shared Instrumentation Grant

Title: *GPU computing resource to enable innovation in imaging and network biology*

Funding period: April 01, 2014 – March 31, 2015

Role in the project: Co-PI with Fred Prior

National Institutes of Health (NINDS), 5R01NS056114

Title: *Atomistic studies of nucleation and oligomerization in polyglutamine aggregation*

Funding period: April 15, 2007 – June 30, 2012

Role in the project: PI

National Science Foundation, MCB-0718924

Title: *Conformational equilibria of intrinsically disordered proteins*

Funding period: September 01, 2007 – August 31, 2011

Role in the project: PI

Hope Center for Neurological Disorders, Washington University School of Medicine

Translational Neuroscience Pilot Project

Title: *Mechanism of Huntingtin Aggregation Regulated by Profilin*

Funding period: June 01, 2011 – May 31, 2013

Role in the project: Principal Investigator

Co-Investigator: Marc Diamond

National Institutes of Health (NCI) U54 CA-119342

Title: *An informatics resource for targeted nanoparticle therapeutics*

NCI Center grant to the Siteman Center for Cancer Nanotechnology Excellence (Center grant

PI: Samuel Wickline)

Funding period: February 01, 2006 – January 31, 2011

Role in the project: Project Principal Investigator

Project Co-Investigators: David Sept, Nathan Baker

Pfizer Inc., St. Louis, MO

Title: *Modeling the aggregation of therapeutic monoclonal antibodies*

Funding period: October 31, 2009 – September 30, 2010

Role in the project: Project Principal Investigator

National Institutes of Health (NCI) Integrated Cancer Research Workspace 94358NBS23

Subcontract for with Booz Allen Hamilton for Nanotechnology working group

Funding period: April 01, 2008 – February 14, 2009

Role in the project: Principal Investigator

National Science Foundation, MCB-0416766

Title: *Studying the origin of conformational preferences in unfolded proteins*

Funding period: September 01, 2004 – August 31, 2007

Role in the project: Principal Investigator

Hope Center for Neurological Disorders, Washington University School of Medicine

Translational Neuroscience Pilot Project

Title: *Investigation of structural changes induced in amyloid A β fibrils by polyphenols*

Funding period: January 01, 2007 – December 31, 2007

Role in the project: Co-Investigator (PI: Jin-Moo Lee)

Fidelity Foundation

Title: *Studies on the process of aggregation in Huntington's disease*

Funding period: January 01, 2006 – December 31, 2006

Role in the project: Principal Investigator

March of Dimes Birth Defects Foundation, Basil O'Connor Starter Scholar Award

Title: *Factors that determine amyloid formation in polyglutamine disorders*

Funding period: February 01, 2004 – June 30, 2006

Role in the project: Principal Investigator

National Institutes of Health, NIA P50 AG05681-20

Pilot grant from Alzheimer's Disease Research Center, Washington University

Title: *Toward a molecular understanding of polyglutamine disorders*

Funding period: May 01, 2003 – April 30, 2004

Role in the project: Principal Investigator

Software

1. **CAMPARI:** A simulation engine that integrates several sampling methodologies including molecular dynamics, rigid body dynamics, Langevin dynamics, novel torsional molecular dynamics, and an extensive code base for Monte Carlo sampling of biological macromolecules (mainly proteins, but also supports nucleic acids). The package was developed mainly by Andreas Vitalis, building on a skeleton that was developed by Pappu in the early days of the lab's existence. CAMPARI can be used for efficient calculation of free energies of solvation, neat liquids, complex fluids, and peptides in explicit solvent. However, the main advantage is its support of implicit solvent paradigms for use in Monte Carlo simulations. It is this aspect that makes CAMPARI unique. Significant work in the Pappu lab has shown that Monte Carlo simulations are extremely useful for efficient sampling of conformational space in conjunction with implicit solvation models such as ABSINTH, which was also developed by Andreas Vitalis in the Pappu Lab. This model may be viewed as an efficient interpolation between the EEF1 and generalized Born (GB) paradigms. CAMPARI will also integrate support for the major variants of the GB framework to facilitate comparative calculations between different implicit solvation paradigms. The CAMPARI engine, first built around the ABSINTH model, was designed for answering questions regarding conformational and binding equilibria of intrinsically disordered polypeptides. However, it has wider usage and has gained acceptance as a *bona fide* engine in the biomolecular simulation community. CAMPARI is available for free download from <http://campari.sourceforge.net>.
2. **CIDER and localCIDER – Classification of Intrinsically Disordered Ensemble Regions:** CIDER is a webserver being developed by the Pappu Lab for calculating parameters relating to disordered protein sequences. Specifically, this will calculate various parameters that help translate primary sequence information into a better understanding of the conformational properties of disordered proteins. The server provides a ready-made annotation on our diagram-of-states for IDPs. In addition, predictions from CIDER yield insights regarding emergent properties of IDPs such as the conversion of polyampholytic IDPs to polyelectrolytes and vice versa as the result of phosphorylation. Alex S. Holehouse is the main developer of CIDER. Available for free download from <http://pappulab.github.io/localCIDER/>.
3. **NPO – a nanoparticle ontology:** Data generated from cancer nanotechnology research are so diverse and large in volume that it is difficult to share and efficiently use them without informatics tools. In particular, ontologies that provide a unifying knowledge framework for annotating the data are required to facilitate the semantic integration, knowledge-based searching, unambiguous interpretation, mining and inferencing of the data using informatics methods. We developed a NanoParticle Ontology (NPO) within the framework of the Basic Formal Ontology (BFO), and implemented in the Ontology Web Language (OWL) using well-defined ontology design principles. The NPO is accessible online at <http://www.nano-ontology.org/>. Dr. Dennis Thomas developed this effort, sponsored by the National Cancer Institute. He was a postdoctoral scientist in my group. He is now at the Pacific Northwest National Laboratory and also works in close collaboration with Dr. Nathan Baker.

RESEARCH MENTORING

Current Doctoral and Undergraduate Students (alphabetical order)

1. **Megan C. Cohan**, Doctoral Student, Department of Biomedical Engineering. Projected graduation date, May 2020.
2. **Furquan Dar**, Doctoral Student, Department of Physics, Projected graduation date, December 2021.
3. **Kourtney L. Kroll**, Undergraduate researcher, Senior in Biomedical Engineering, Washington University in St. Louis.
4. **Jared Lalmansingh**, Doctoral Student, Department of Physics. Projected graduation date, December 2020.

Current Postdoctoral and other Scientists (alphabetical order)

1. **Jeong-Mo Choi**, Postdoctoral Scientist
2. **Martin Fossat**, Postdoctoral Scientist
3. **Alex S. Holehouse**, Postdoctoral Scientist
4. **Ammon E. Posey**, Research Scientist
5. **Mary O. G. Richardson**, Junior Research Scientist and Scientific Programmer
6. **Kiersten M. Ruff**, Postdoctoral Scientist

Lab alumni – reverse chronological order

1. **Sang Eun Jee**, Postdoctoral Scientist, November 2016 – October 2017.
2. **Divya Natarajan**, MD Student, Washington University School of Medicine, graduation date, May 2020.
3. **Tyler S. Harmon**, Doctoral Student, Department of Physics. Received PhD in April 2017. Currently, postdoctoral scientist at the Max Planck Institute in Dresden, Germany.
4. **Rajni Verma**, Postdoctoral Scientist, October 2015 – June 2016.
5. **Rahul K. Das**, Postdoctoral Scientist. Currently, a senior research scientist at GNS Healthcare, Cambridge, MA.
6. **Anuradha Mittal**, Postdoctoral Scientist. Currently, a senior Bioinformatics Scientist at Affymetrix, San Francisco, CA.
7. **Laruen M. Bedell**, Undergraduate Student, Department of Biomedical Engineering.
8. **Kanchan Garai**, Research Assistant Professor and Research Scholar, Center for Biological Systems Engineering. Currently, Assistant Professor at the TIFR Centre for Interdisciplinary Studies, Hyderabad, India.
9. **James Ahad**, Undergraduate student, Biomedical Engineering. Currently, an MSTP student at Case Western University School of Medicine.
10. **Scott L. Crick**, Doctoral Student, Biomedical Engineering. Received Ph.D. in August 2011. Completed a two-year Postdoc in the lab in July 2013. Currently working as a Licensing Associate in the Office of Technology Management at Washington University in St. Louis.

11. **Siddique J. Khan**, Postdoc, April 2012 – May 2013.
12. **Nicholas Lyle**, Doctoral Student, Computational & Systems Biology Program, Division of Biology & Biomedical Sciences. Received Ph.D. in May 2013. Currently, Senior Scientific Analyst at Partek Inc., Chesterfield, MO.
13. **Tony Wang**, Summer undergraduate researcher, Summer 2012.
14. **Marta Wells**, Summer undergraduate research, Summer 2011 and 2012. Currently a graduate student in Computational Biology at Carnegie-Mellon University.
15. **Albert H. Mao**, M.D.-Ph.D. student, Computational & Molecular Biophysics Program, Division of Biology & Biomedical Sciences. Received Ph.D. in August 2012. Currently doing his residency in anesthesiology at Harvard Medical School, Beth Israel Hospital.
16. **Jordan Nick**, Summer HHMI undergraduate fellow, Summer 2011.
17. **Kelly Culhane**, SURF student, Summer 2011. Currently, a Ph.D. student in Biochemistry & Biophysics at Yale University.
18. **Aditya Radhakrishnan**, Master's student (BS/MS), Summer 2010 – Summer 2011. Currently Ph.D. student in Computational & Molecular Biophysics at Johns Hopkins University.
19. **Nil Gural**, Undergraduate researcher, Spring 2011. Currently Ph.D. student in the Harvard-MIT Health Sciences Program.
20. **Adam T. Steffen**, Scientific programmer, Summer 2007 – December 2010. Currently a software engineer at Partek Inc., Chesterfield, MO.
21. **Alexander French**, Undergraduate researcher, Summer 2010. Currently graduate student in Biochemistry & Biophysics at the University of Chicago.
22. **Anil Kumar**, Postdoctoral scientist, December 2009 – August 2010. Currently a postdoc at the University of Toronto in synthetic organic chemistry.
23. **Caitlin L. Chicoine**, Undergraduate researcher, Summer of 2009, Graduated from Washington University, School of Engineering & Applied Sciences Valedictorian.
24. **Matthew A. Wyczalkowski**, Biomedical Engineering. Received his Ph.D. in December 2009. Currently a senior postdoctoral scientist at The Genome Institute, Washington University School of Medicine.
25. **Tim E. Williamson**, Molecular Biophysics Program, Division of Biology & Biomedical Sciences and Staff Scientist. Received MS in May 2009. Currently working as a technical officer at Monsanto Inc., St. Louis, MO.
26. **Andreas Vitalis**, Doctoral Student, Molecular Biophysics Program, Division of Biology & Biomedical Sciences. Received his Ph.D. in June 2009. Currently an independent research scientist completing his research habilitation in the Department of Biochemistry at the University of Zurich.
27. **Alan A. Chen**, Doctoral Student, Molecular Biophysics Program, Division of Biology & Biomedical Sciences. Received his Ph.D. in May 2009. Currently assistant professor of chemistry the University of Albany, RNA Institute.
28. **Jose Pulido**, Undergraduate Trainee, May 2008 – October 2008.
29. **Xiaoling Wang**, Research scientist, September 2004 – February 2008. Currently a staff scientist at Pfizer Inc. in St. Louis, MO.

30. **Hoang T. Tran**, Doctoral student, Biomedical Engineering. Received Ph.D. in December 2007. Currently a staff scientist in the drug discovery at the M.D. Anderson Cancer Center in Houston, TX.
31. **Alexander N. Drozdov**, Postdoctoral Scientist, September 2002 – April 2004. Currently at Mentor Graphics, San Jose, CA; Senior scientist in the photolithography research group.
32. **Magdalena Fus**, Undergraduate Trainee, September 2004 – May 2005.
33. **Tirath Patel**, Undergraduate Trainee, September 2004 – May 2005.

Other Invited talks: Fall 2001 – present (reverse chronological order)

1. Princeton University, Department of Chemical & Biochemical Engineering, March 2018
2. University of California, Berkeley, Molecular and Cell Biology, April 2017
3. Hospital for Sick Kids, Toronto, Molecular Medicine Seminar Series, March 2017

TEACHING

1. *Bioengineering Thermodynamics in Practice*, Laboratory Course, BME 329, Fall 2014 & 2015. Audience: Biomedical Engineering juniors.

2. *Bioengineering Thermodynamics*, BME 320B, Fall 2010 onward. Audience: Biomedical Engineering juniors.
3. *Applied Mathematics for Biomedical Sciences*, Fall 2013. Audience: Graduate students in Biomedical Engineering & quantitative programs in the Division of Biology & Biomedical Sciences.
4. *Chemical Thermodynamics*, ChemE 320 / BME 320, Fall 2008 and 2009. Audience: Chemical Engineering sophomores and Biomedical Engineering juniors.
5. *Biomedical Engineering Design*, BME 401, Fall 2007. Co-course master for the capstone senior design course. Audience: Biomedical Engineering seniors, and graduate students in BME and Molecular Biophysics.
6. *Principles of Protein Structure*, BME 461, Every Fall starting Fall 2003. Audience: Seniors and graduate students in Biomedical Engineering.
7. *Introduction to Biomolecular Statistical Thermodynamics*, BME 531, Graduate Level, Every Spring, starting Spring 2002. Audience: Graduate students in Biomedical Engineering, Chemical Engineering, and Molecular Biophysics. Last time course was taught: Spring 2007.
8. *Modeling Biomolecular Systems, Part II*, BME 540, Fall 2004. Audience: Graduate students in Biomedical Engineering, Chemical Engineering, Molecular Biophysics, and Computational Biology.
9. *Quantitative physiology, part II*, BME 301B, **Four Lectures** on *Applications of control theory in modeling physiological systems*, Spring 2003 – Spring 2005. Audience: Juniors majoring in Biomedical Engineering.
10. *Quantitative physiology, part II*, BME 301B, **Two Lectures** on the *Quantitative aspects of Antigen-Antibody Interactions and their role in control and regulation of immune response*, Spring 2006. Audience: Juniors majoring in Biomedical Engineering.

LEADERSHIP EXPERIENCE

Leadership Within Washington University

Center for Biological Systems Engineering

I co-chaired the strategic planning committee commissioned by the Dean of the School of Engineering & Applied Sciences. The goal was to craft a strategic plan for the next 5-10 year period for the school.

I am the founding Director of the Center for Biological Systems Engineering (CBSE). This center is the home of network biology at Washington University and has incorporated researchers from the School of Engineering & Applied Science (SEAS) and the School of Medicine. These researchers deploy multiscale, systems-based approaches to model, predict and design functions of biological systems that result from the integration of signals and responses of biomolecular and cellular networks.

I led a cluster search to recruit suitable investigators to populate the CBSE. The search was successful in recruiting three new investigators, two by way primary appointments in Biomedical Engineering (BME), and one with primary appointment in Pathology & Immunology (P&I). Additionally, I recruited out to four kindred scientists from BME and P&I with expertise in

multiscale approaches to challenging problems in biomedical science. Within a short period, I assembled a talented group of eight investigators, six of whom are assistant professors.

Research interests within the center span a range of topics including modeling protein self-assembly and homeostasis networks, reverse engineering networks controlled by post-translational modifications, utilizing and adapting novel sequencing methods to interrogate the organization of small RNA networks, chemical informatics geared toward prospecting for and repurposing novel small molecules, de novo design of protein interaction networks, and developing advanced imaging modalities for non-invasive interrogations of biological tissues.

Center for High Performance Computing

I am currently the co-director, with Dr. Fred Prior, of the Center for High Performance Computing (CHPC) at Washington University. My close involvement with the CHPC has contributed to a fundamental improvement of the computational environment at Washington University, which was essentially non-existent a few years ago. This effort has required several delicate interactions and management of important issues, and I have learned to become proficient in cultivating inter-personal relationships that enable rather than compromise the success of projects.

Department of Biomedical Engineering

I have contributed mainly as a model citizen to the curricular and research programs within the BME department. In addition to participating on key departmental committees, I took the lead on two specific curricular matters. I took over the teaching of Thermodynamics for our BME undergraduates and redesigned this course to emphasize the importance of thermodynamics concepts across the molecular, cellular, and physiological scales. This initiative helped improve the synergy between thermodynamics and the two quantitative physiology courses that are taught in the department. I added a focused problem-solving module to this course. I proposed the idea of developing a new laboratory module to go along with this course, and this has come to fruition following the recruitment of a suitably qualified instructor to handle these duties. My efforts in Bioengineering Thermodynamics help illustrate my ability to craft a vision and see the vision through to fruition through earnest effort and refinement of the vision by incorporating critical feedback.

I have brought a similar approach to bear on the topic of developing a new applied mathematics course for biomedical sciences. I am currently teaching this course that I developed from scratch. It is being designed to provide a direct conduit from concept to application of mathematics in biology and biomedical sciences. It is the only course of its kind at Washington University and this has arisen entirely through my initiative.

From a research standpoint, I have been actively involved in faculty recruitment within BME, have chaired and been a member of search committees, and I was the primary author of the white paper that was crafted roughly two years ago for the future research mission of the BME department. In crafting this white paper, I worked closely with a key senior colleague in the department, and actively solicited and incorporated the inputs from all of my BME colleagues, thus showcasing my ability to be both visionary and collaborative.

SERVICE

Professional activities

1. Reviewer of manuscripts for *Biochemical Journal*, *Biochemistry*, *Biomacromolecules*, *Biophysical Journal*, *Biophysical Chemistry*, *Cell*, *Cell Reports*, *eLife*, *Journal of Chemical Physics*, *Journal of Molecular Biology*, *Journal of Physical Chemistry B*, *Structure*, *Journal of the American Chemical Society*, *Journal of Chemical Theory and Computation*, *Journal of Computational Chemistry*, *Nature*, *Proceedings of the National Academy of Sciences USA*, *PLoS: Computational Biology*, *PLoS One*, *Science*, *Science Signaling*, *Structure*.
2. Panelist for review of National Science Foundation SBIR grants, Bioinformatics.
3. Panelist and reviewer of grants for National Science Foundation, Molecular & Cellular Biophysics.
4. Ad hoc reviewer for National Science Foundation, Biotechnology.
5. Grant Reviewer for Alzheimer's Disease Research Center, Washington University
6. Grant Reviewer for HighQ Foundation.
7. Co-author and contributor to Statement of Significance Petition to form a new Intrinsically Disordered Protein subgroup within the Biophysical Society.
8. Primary organizer of 1st International ICAM workshop on Multiscale Interactions and Dynamics in Complex Biological Systems, Washington University in Saint Louis, May 27-29, 2006.
9. Co-organizer for 20th Annual Gibbs Meeting on Biothermodynamics, October 7-10, 2006, Carbondale, IL.
